Rivers: Form and Process of Alluvial Channels

Keith Richards

Rivers: Form and Process of Alluvial Channels Keith Richards

First published in 1982, this remains a seminal work in geomorphology, a classic text. The reviews speak for themselves: "Rivers is undoubtedly one of the major contributions to the subject of fluvial geomorphology in the last decade. Keith Richards provides a detailed review of "the state of the art" in a field which has grown so much in recent years, that, on this basis alone, the book is a major achievement. It is an essential reference text for serious students and practitioners in geomorphology, sedimentology and river engineering."

Sedimentology "In this book Keith Richards has assembled a wealth of information on the geomorphology of rivers.. (He) is to be congratulated on producing a thoroughly researched, up-to-date account of fluvial processes and landforms. This book will be a standard text for many years to come." Geography "This lucid and scholarly review will undoubtedly serve as an excellent advanced text for geomorphology courses and as a standard reference work for students in allied subjects." The Times Higher Education Supplement Keith Richards is Professor of Geography at the University of Cambridge, where he is also a Fellow of Emmanuel College. He has been a member of the Department (University Lecturer, Reader, then Professor) since 1984, and before that was at the University of Hull. He originally graduated from Cambridge, both at Bachelor and PhD levels. During his career he has published in several areas of geomorphology, but his main research focus has been in fluvial geomorphology. He has been Secretary and Chairman of the British Geomorphological Research Group, and an editor of *Earth Surface Processes and Landforms*. He has written or edited nine books and about 150 papers. His research interests have also included glacial hydrology, catchment and hillslope processes, and innovation in modelling and monitoring approaches in geomorphology and hydrology (such as terrestrial photogrammetry, MRI, computational fluid dynamics, and discrete element methods). He has also worked on the interaction of fluvial, hydrological and ecological processes in floodplain environments, including the roles of channel migration dynamics as a control of floodplain biodiversity, the roughness effects of woody riparian vegetation, and hydrological influences on floodplain ecology. His interests also range from the more philosophical aspects of field-based environmental research, to the application of research to practical problems (in, for example, Honduras, Ethiopia, Saudi Arabia, Nepal, Thailand, as well as in the UK and Europe).

From reader reviews:

Stephen Conway:

Do you have favorite book? In case you have, what is your favorite's book? Reserve is very important thing for us to learn everything in the world. Each reserve has different aim or even goal; it means that reserve has different type. Some people really feel enjoy to spend their the perfect time to read a book. They are really reading whatever they get because their hobby is actually reading a book. Why not the person who don't like reading a book? Sometime, particular person feel need book when they found difficult problem or exercise. Well, probably you will need this Rivers: Form and Process of Alluvial Channels.

Eric Vegas:

What do you concerning book? It is not important along with you? Or just adding material when you require something to explain what your own problem? How about your free time? Or are you busy man or woman? If you don't have spare time to accomplish others business, it is give you a sense of feeling bored faster. And you have time? What did you do? All people has many questions above. They need to answer that question mainly because just their can do that will. It said that about reserve. Book is familiar in each person. Yes, it is proper. Because start from on pre-school until university need this Rivers: Form and Process of Alluvial Channels to read.

Ann Ginsberg:

Reading a book being new life style in this 12 months; every people loves to read a book. When you study a book you can get a lots of benefit. When you read textbooks, you can improve your knowledge, because book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you wish to get information about your examine, you can read education books, but if you want to entertain yourself read a fiction books, these kinds of us novel, comics, and soon. The Rivers: Form and Process of Alluvial Channels provide you with new experience in examining a book.

Pauline Browne:

A lot of guide has printed but it differs. You can get it by web on social media. You can choose the best book for you, science, comedy, novel, or whatever through searching from it. It is identified as of book Rivers: Form and Process of Alluvial Channels. You can contribute your knowledge by it. Without leaving behind the printed book, it might add your knowledge and make a person happier to read. It is most crucial that, you must aware about publication. It can bring you from one spot to other place.
