Atlas of Hematologic Neoplasms Tsieh Sun

Due to its rapid development in recent years, hematopathology has become a very complicated discipline. The current development is mainly in two aspects: the new classification of lymphomas and leukemias and the new techniques.

The Revised European-American Classification of Lymphoid Neoplasms (REAL classification) and the World Health Organization (WHO) classification of hematologic neoplasms require not only morphologic criteria but also immunophenotyping and molecular genetics for the diagnosis of hematologic tumors. Immunophenotyping is performed by either flow cytometry or immunohistochemistry. There are many new monoclonal antibodies and new equipments accumulated in recent years that make immunophenotyping more or more accurate and helpful. There are even more new techniques invented in recent years in the field of molecular genetics. In cytogenetics, the conventional karyotype is supplemented and partly replaced by the fluorescence in situ hybridization (FISH) technique. The current development of gene expression profiling is even more powerful in terms of subtyping the hematologic tumors, which may help guiding the treatment and predict the prognosis. In molecular biology, the tedious Southern blotting technique is largely replaced by polymerase chain reaction (PCR). The recent development in reverse-transcriptase PCR and quantitative PCR makes these techniques even more versatile.

Because of these new developments, hematopathology has become too complicated to handle by a general pathologist. Many hospitals have to hire a newly trained hematopathologist to oversee peripheral blood, bone marrow and lymph node examinations. These young hematopathologists are geared to the new techniques, but most of them are inexperienced in morphology. No matter how well-trained a hematopathologist is, he or she still needs to see enough cases so that they can recognize the morphology and use the new techniques to substantiate the diagnosis. In other words, morphology is still the basis for the diagnosis of lymphomas and leukemias.

Therefore, a good color atlas is the most helpful tool for these young hematopathologists and for the surgical pathologists who may encounter a few cases of hematologic tumors from time to time. In a busy daily practice, it is difficult to refer to a comprehensive hematologic textbook all the time. There are a few hematologic color atlases on the market to show the morphology of the normal blood cells and hematologic tumor cells. These books are helpful but not enough, because tumor cell morphology is variable from case to case and different kinds of tumor cells may look alike and need to be differentiated by other parameters.

The best way to learn morphology is through the format of clinical case study. This format is also consistent with the daily practice of hematopathologists and with the pattern in all the specialty board examinations. Therefore, it is a good learning tool for the pathology residents, hematology fellows as well as medical students.

This proposed book will present 83 clinical cases with clinical history, morphology of the original specimen and a list of differential diagnoses. This is followed by further testing with pictures to show the test results. At the end, a correct diagnosis is rendered with subsequent brief discussion on how the diagnosis is achieved. A few useful references will be cited and a table will be provided for differential diagnosis in some cases. The major emphasis is the provision of 500 color photos of peripheral blood smears, bone marrow aspirates, core biopsy, lymph node biopsy and biopsies of other solid organs that are involved with lymphomas and leukemias. Pictures of other diagnostic parameters, such as flow cytometric histograms, immunohistochemical stains, cytogenetic karyotypes, fluorescence in situ hybridiza

From reader reviews:

Merideth Davis:

This Atlas of Hematologic Neoplasms usually are reliable for you who want to be described as a successful person, why. The main reason of this Atlas of Hematologic Neoplasms can be one of many great books you must have is giving you more than just simple studying food but feed a person with information that possibly will shock your previous knowledge. This book is usually handy, you can bring it almost everywhere and whenever your conditions throughout the e-book and printed versions. Beside that this Atlas of Hematologic Neoplasms giving you an enormous of experience including rich vocabulary, giving you trial of critical thinking that we know it useful in your day task. So , let's have it and luxuriate in reading.

Raymond Simmons:

Reading a reserve can be one of a lot of task that everyone in the world loves. Do you like reading book and so. There are a lot of reasons why people like it. First reading a guide will give you a lot of new facts. When you read a guide you will get new information due to the fact book is one of several ways to share the information as well as their idea. Second, examining a book will make anyone more imaginative. When you looking at a book especially fictional book the author will bring someone to imagine the story how the people do it anything. Third, you could share your knowledge to some others. When you read this Atlas of Hematologic Neoplasms, you can tells your family, friends as well as soon about yours reserve. Your knowledge can inspire others, make them reading a book.

Alma Hillyer:

Do you have something that you enjoy such as book? The guide lovers usually prefer to opt for book like comic, small story and the biggest some may be novel. Now, why not trying Atlas of Hematologic Neoplasms that give your satisfaction preference will be satisfied through reading this book. Reading behavior all over the world can be said as the method for people to know world a great deal better then how they react in the direction of the world. It can't be explained constantly that reading addiction only for the geeky particular person but for all of you who wants to possibly be success person. So , for all you who want to start looking at as your good habit, you could pick Atlas of Hematologic Neoplasms become your starter.

Thomas Burke:

Reading a e-book make you to get more knowledge as a result. You can take knowledge and information originating from a book. Book is composed or printed or descriptive from each source which filled update of news. On this modern era like now, many ways to get information are available for you. From media social like newspaper, magazines, science reserve, encyclopedia, reference book, book and comic. You can add your understanding by that book. Isn't it time to spend your spare time to open your book? Or just looking for the Atlas of Hematologic Neoplasms when you necessary it?
